

AL KHALAF
CONTRACTING CO. W. L. L

INFORM SZ

**BUSINESS
PROFILE**

ABOUT OUR COMPANY

AL KHALAF has become the primary choice of customers for Storage / Racking Solutions, Steel Fabrication, Erection works, Wall Dividers, Room Partitions, Aluminium Cladding works and Portable Cabin Manufacturing works across Kuwait today. We have undergone through various technological upgrades over the years and have successfully grown to a multi diversified services contractor in all kinds of engineering works.

RELIABILITY

Our reputation for quality, reliability and safe working practices, skilled workforce and well experienced management have made us the leaders of Racking Storage for Public & Private infrastructure sector in Kuwait market.

QUALITY

With highly professional and experienced management committed to excellence, we execute each project in a timely manner without compromising on quality and durability.

COMPANY POLICY

We, Al Khalaf are focused on delivering high-quality & professional products and services to the customers according to their taste and needs, with a strong team of highly qualified and skilled personal. We stay at the leading edge of services by evolving with the market trends, adopting new technologies and setting high standards to benefit our customer.

OTHER WORK CATEGORIES

- Aluminium Fabrication
- Mild Steel Fabrication
- Aluminium Composite Panel (ACP)
- Portable Cabins
- Interior Design & Production

INDUSTRIAL RACKING KUWAIT

Al Khalaf provides the best industrial racking storage & solution as per your requirements. Our material handling storage system is designed to store materials with minimal wastage of space and operational convenience.

- Selective Racking
- Double Deep Racking
- Drive in & Drive Through Racking
- Long Span Racking
- VNA Racking
- Bolt Free Shelving
- Cantilever Racking
- Live in Racking
- Carton Flow Racking
- Shuttle Racking
- Electro Mobile Racking
- Slotted Angle Shelving

TYPES OF RACKING SYSTEM

SELECTIVE RACKING

These are the most popular and economical racking solution which provide 100 % selectivity of the goods and high rotation of stocks with easy operation and less redundancy.

We can get 30-40 % of the total floor area depending on the material handling equipment.

VNA RACKING

These are similar to selective racking system which provides 100 % selectivity of the goods and high rotation of stocks with easy and less redundancy but with very narrow aisle (VNA). VNA equipment are used as lift trucks with high level of accuracy guided by rails or wire guidance for moving fast among the Aisles. We can get 50 % usage of the total floor area.

DRIVE-IN DRIVE-THROUGH RACKING

Drive in pallet racking system is used for high density storage. This is most suitable for storing large volume homogeneous products. The operation will be with a counter balance forklift or reach trucks on the basis of LIFO or FILO (Last in First Out or First in Last Out)

We can get up to 60 % usage of the total floor area.

DOUBLE DEEP PALLET RACKING

Double deep racking system stores two pallet deep in a single row and four pallets deep in double entry rack. Its operation is with a special reach truck. This increases 30 % more capacity than selective racking and the selectivity decreases to 50 % on direct pallet access. This is most suitable for storing large volume homogeneous products.

LIVE IN RACKING

Live in racking system provides maximum utilization of volume with the aid of gravity and allow the pallet flow from the loading end to offloading end with the help of rollers incorporated on a sloped lane within the rack and this system works on the basis of FIFO (First in First Out).

SHUTTLE RACKING

We can call this as a new age drive in pallet racking system which can go up to 20 pallet deep. This is most suitable for storing large volume homogeneous products. The shuttle will pick and deliver the pallets from the loading/offloading end to the depth. The operation is on the basis of FIFO or LIFO (First In Last Out or Last in First Out)

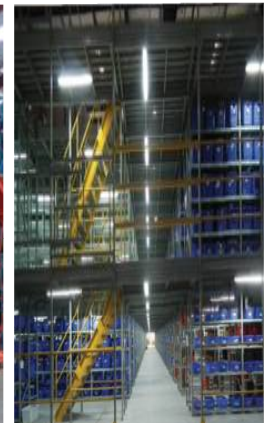

ELECTRO MOBILE PALLET RACKING

Electro mobile pallet racking is the mobile version of the conventional static pallet racking. This provides 100 % selectivity and 90-100 % capacity over the selective racking system. This operates in power driven mobile bases which runs on the rails installed on the floor and the racks are mounted on the bases controlled by a remote control for its sidewise movement.

MULTI TIER RACKING

Rack supported multitier is designed and constructed for high volume selective items with less weight preferably and it required quality workmanship and perfection considering safety at high priority. This design consists of walkways with perforated gratings in the upper levels aisles and access ladders to different levels starting from ground floor. This is a cost effective solution for high density storage items.

LONG SPAN RACKING

The long span racking system will easily meet individual requirements for optimised warehouse technology. Especially suitable for the storage of bulky items.

Long span racking system perforation is a great fit for all tasks regarding stored goods, storage location and warehousing.

CANTILEVER RACKING

The cantilever racking is ideal for storing long or variable length items such as metal beams, pipes, molding, wooden boards, metal and plastic sheets, etc. For different loads we provide different types.

- A. Light duty cantilever racking.
- B. Medium duty and heavy duty cantilever racking.

CARTON FLOW RACKING

Carton-flow Racking is a storage system where cartons are Served from one side, and retrieved from the other

TYPES OF SHELVING SYSTEM

BOLT FREE SHELVING

It is designed for fast, easy and simple solutions that does not require any special tools. As per your requirement can be quickly adjustable to keep pace with any modifications to your storage requirement. It is suitable for virtually all kinds of materials from small element to heavy cartons. The modular design allows maximum storage to be achieved, with units extending to the ceiling if required.

SLOTTED ANGLE SHELVING

Slotted angle shelving / bolted shelving system for light storage.

The versatility of slotted - angle shelving gives you the option of straightforward assembly of shelves as well as a wide range of other items.

MULTI-TIER SHELVING

Shelving supported multitier is designed for high volume selective items with less weight preferably. This design consists of walkways with perforated gratings in the upper levels aisles and access ladders to different levels starting from ground floor. This is a cost effective solution for high density storage items.

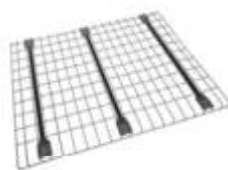

MOBILE SHELVING SYSTEM

Mobile storage systems allow you to store your products in a systematic and well-organized manner. Businesses that deal with new files and documents everyday should essentially have these flexible and compact storage units to suit different storage needs.

ACCESSORIES

GI Sheet Decking

Wire Mesh Decking

Pallet Support Bar

Plastic Protector

Column Guard

Frame Guard

PU Protector

Plastic Pallet

Plastic Bins
